Good vs Bad Design

Bad Design:

Reasons:

1) No visual hierarchy

All three cards look equally important. There's nothing guiding the user on where to look first or what action to take.

2) Unclear purpose of the screen

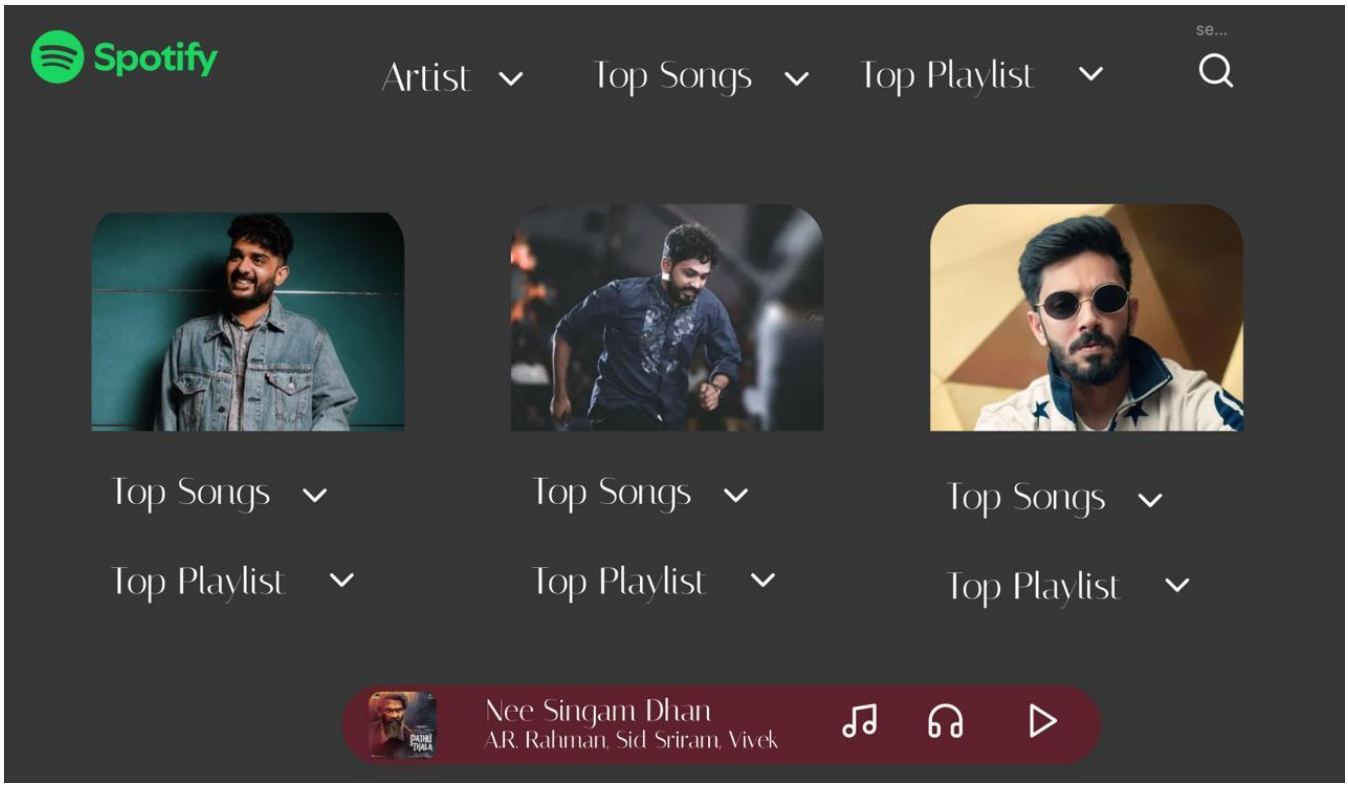
There is no artist recommendations, Recently played songs.

The design doesn't explain what this screen is for.

3) Missing context and labels

There are no names, categories, or descriptions under the images. Users are forced to guess who or what these represent.

Good design:



Reasons:

1) Clear visual hierarchy

Navigation is placed at the top, content is in the center, and the music player is fixed at the bottom. This helps users instantly understand how the screen is structured.

2) Proper context and clarity

Clear labels like Top Songs and Top Playlist explain what the user can do, reducing confusion and improving usability.

3) Good readability and contrast

The dark background combined with light text improves readability and aligns well with the Spotify theme.
